OPORTO

THE ORIGINS OF JNF

Since 1965, our main activity has been the production of hardware for furniture and construction, with a path of continuous evolution and adaptation to the economy and the challenges of the market, devoting special attention to the development of solutions that meet the trends of contemporary architecture.

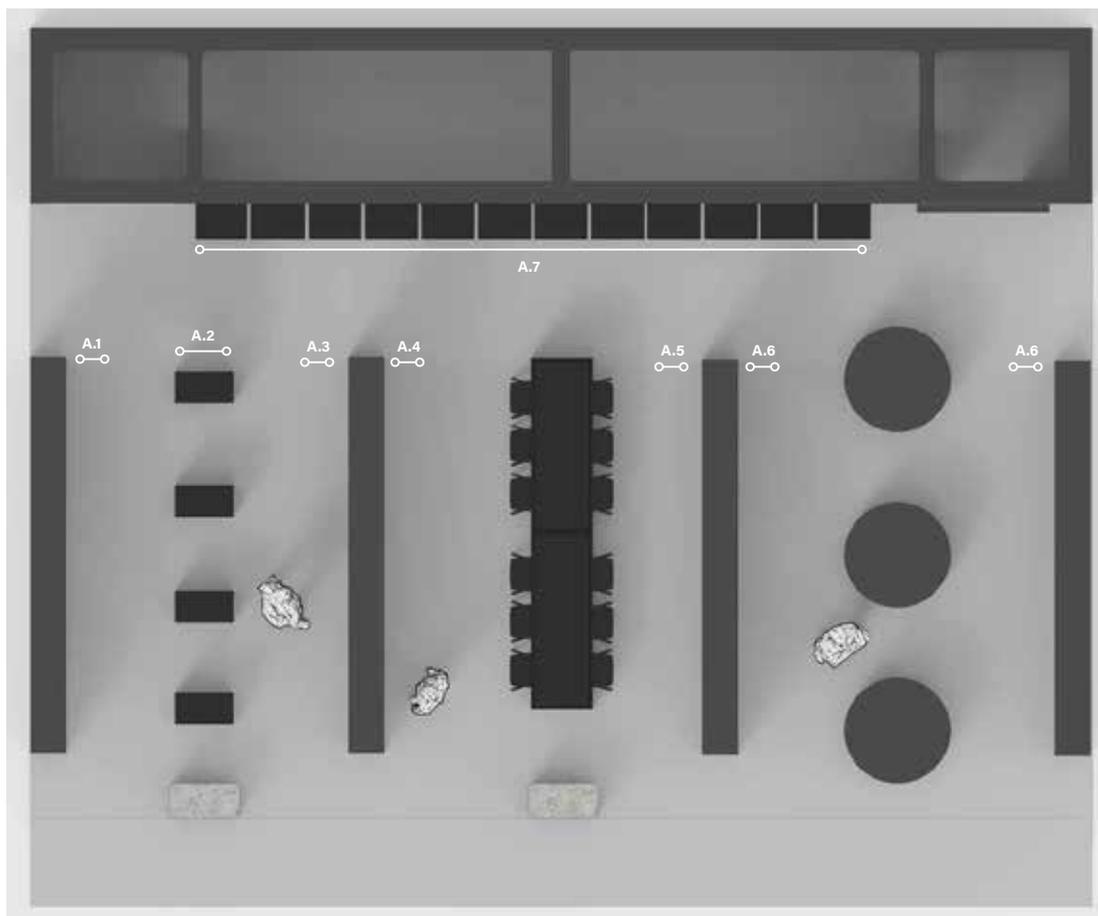

A dynamic team that seeks to create innovative solutions in a clear and appropriate way, always reaffirming the company's identity and its positioning in the market.

We are very active in observing the trends of the international market, even in different areas, having a considerable number of new projects permanently under development.

VOYAGER

THE FUTURE IS WIRELESS

Voyager is an innovative access control software that allows you to control your door from anywhere in the world.

JNF developed an application that is available on the App Store, Google Play and URL for any device (web version).

All the application's features were designed to be simple and intuitive for users.

The main advantage of this application is the possibility of controlling all devices remotely, thus providing greater convenience to users.

Manage your hotel with complete security. With the Voyager system you don't have to worry about security.

The entire access control system is equipped with the most advanced technological resources. They can be managed in a closed autonomous LAN network or in CLOUD.

The future is wireless. With the Voyager system it is no longer required to have a wire network to have real time control on the devices.

It has never been easier to manage access and security with different solutions, for rentals, hotels and even private homes. Everything in the palm of your hand. Offer a hassle-free check-in experience.

All features were designed to be simple and intuitive for users, easy to interpret without the need for training or manuals. Application available on different interfaces: APP for Smartphone, Tablet and URL for any device.

Our Interactive features will help you in your day to day management of all devices.

You can consult all operations performed including online registrations.

Full control over devices with the possibility of creating different access systems, using PIN, Card, Virtual Key or Fingerprint. Also is possible to share devices with other users.

Through NFC technology you can register your NFC cards or use your phone to open the door.

Organize your devices into different groups that are fully managed by you.

Also you can visit our support center for any queries regarding all devices.

— ACCESS CONTROL SYSTEMS —

THE ACCESS CONTROL SOLUTION FOR HOTEL MANAGEMENT

010

011

VOYAGER CORPORATE

ACCESS CONTROL SOLUTION FOR HOTEL MANAGEMENT

The hotel industry is increasingly linked to technology for better management and access control.

JNF developed a software designed for the hotel industry, with the aim of ensuring greater security, comfort and accessibility to most of the services available at the hotel.

The **VOYAGER Corporate** software can be supplied with a local server, to guarantee greater security and

autonomy in access management, as well as customized services tailored to each hotel.

Multiple services will be available on each guest's smartphone using the VOYAGER Corporate.

This application is prepared to establish a direct connection between the guest and the hotel. Greater comfort and speed when dealing with a guest's most demanding requests.

012

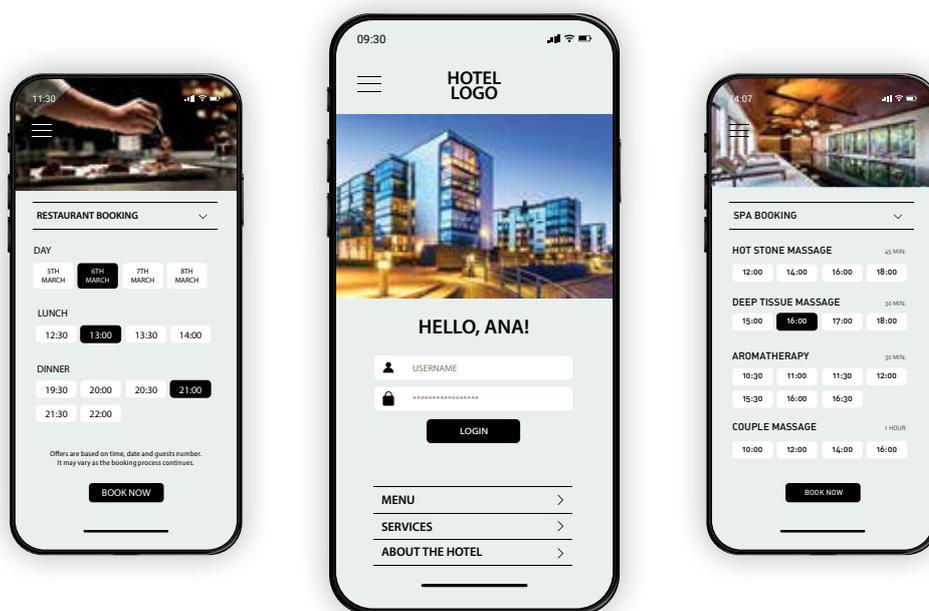

User experiences with mobile resources are increasingly common, comfortable and fast.

This new access control technology, in addition to guaranteeing entrances to the hotel room, can also be used to schedule other services available at the hotel, such as access to the spa, breakfast service, or even a late check-out. All these services can be notified and compiled into monthly reports to analyze occupancy as well as service performance. These are examples of what will be possible to manage with this new software.

All services available in the palm of your hand, for a more comfortable experience. A hotel management service that gives you the flexibility and reliability you need, without compromising the security of your hotel.

Area dedicated to human resources management, with monitoring of services such as cleaning, reception and maintenance. Different types of access permissions to different areas of the hotel. Access to all entry records for internal users. Control of the cleanliness of the rooms. Automatic issuance of cleaning service after guest check-out.

PENDULUM

THE PERFECT COMBINATION OF DESIGN AND FUNCTIONALITY

JNF developed an innovative magnetic lock with flush handle concept for sliding doors. The concept was based in the simplicity of operation, basic shapes, ergonomics and very easy installation.

The activation and locking without noise was one of our main focus on the development, as this type of locks is mainly used for residential purpose the comfort is mandatory.

JNF is proud to announce that the PENDULUM magnetic sliding door lock, has won a Red Dot Award in the “Product Design” category, one of the world’s largest design competitions.

“The PENDULUM magnetic sliding door lock impresses with its elegance, conclusively combining the shape of the rectangle and the function of the innovative magnetic lock” – statement by the jury.

016

ULTRA SILENT MAGNETIC LOCK FOR SLIDING DOORS.

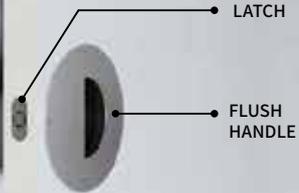

JNF developed an innovative magnetic lock with flush handle concept for sliding doors. The concept was based in the simplicity of operation, basic shapes, ergonomics and very easy installation. The activation and locking without noise was one of our main focus on the development, as this type of locks is mainly used for residential purpose the comfort is mandatory.

Ergonomic and no aggressive edges, even with square shapes is archived with careful production, taking special attention to all small details, such as making this product suitable for handling by people with disabilities.

JNF applied a Patent and design protection for this model, as design and mechanical features about this lock stand out from what we are used to see in the market.

GHOST LOCK

MAGNETIC HOLDER + LATCH

Presented on the market for several years, this locking system for sliding or rebated doors, together with a magnetic retainer, holds the door in place. This system is highly ergonomic and an alternative to the traditional door handle. Its sleek design integrates seamlessly into contemporary or traditional interiors, enhancing both the look and practicality of your space. Durable, reliable, and easy to install, this locking system is the ultimate choice for those seeking to elevate their doors' performance and style.

PRIVACY (for rebated doors), This setting ensures a secure and controlled closure, providing complete privacy. Ideal for areas where confidentiality and security are important, such as offices, bathrooms, or bedrooms.

Innovative locking mechanism: Features a concealed lever inside the flush handle, activating the lock with a simple downward motion for seamless operation.

Emergency access: From the outside, the lock can be easily overridden using a special key, ensuring safety and accessibility when needed.

Minimalist design: The sleek and flush-mounted handle complements modern interiors while keeping functionality discreet.

User-Friendly: Intuitive operation makes it easy to lock and unlock without compromising on aesthetics.

Reliable and secure: Built with durable materials for long-lasting performance and peace of mind.

GHOST LOCK

FOR SLIDING DOORS

PRIVACY (for sliding doors), This setting ensures a secure and controlled closure, providing complete privacy. Ideal for areas where confidentiality and security are important, such as offices, bathrooms, or bedrooms.

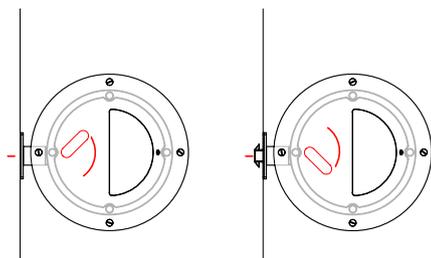

Innovative locking mechanism: Features a concealed lever inside the flush handle, activating the lock with a simple downward motion for seamless operation.

Emergency access: From the outside, the lock can be easily overridden using a special key, ensuring safety and accessibility when needed.

DUALMAG

FOR PASSAGE DOORS

021

DualMag is a magnetic door holder with dual attraction options

Two magnetic strengths: Choose between two levels of magnetic attraction power to perfectly suit your door's size and weight.

No locking elements: Keeps the door securely in the closed position using only magnetic force—simple, sleek, and effective.

Smooth and silent operation: Ensures a gentle hold and release without noise or wear on the door or frame.

Minimalist design: Perfect for modern interiors, offering functionality without compromising on aesthetics.

Versatile application: Suitable for various door types, providing reliable performance and ease of use.

Upgrade to a clean, locking-free solution for maintaining door closure with our innovative magnetic door holder.

COPLAN SERIES

3D INVISIBLE HINGE

The 3D Coplan invisible hinge was designed to be hidden within the structure of a door or panel, offering both aesthetic appeal and advanced functionality.

These hinges are often used in high-end cabinetry, modern architecture, and sleek furniture designs where a clean, uninterrupted look is desired.

As the name suggests, the hinge is typically “invisible” from the exterior, providing a seamless visual appearance.

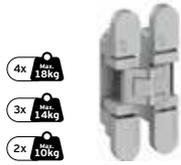

The key feature is its ability to pivot in multiple directions.

Unlike traditional hinges, which only allow for rotation around a single axis, a 3D hinge can offer three types of adjustment: height adjustment, side-to-side adjustment and depth adjustment.

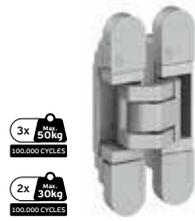

Our Coplan 3D invisible hinge can elevate the overall look and functionality of your space.

Magnetic, silent and gap-canceling mechanism: Experience seamless operation with reduced noise and enhanced door alignment.

A2 - Concealed front plate screws: A refined minimalist aesthetic that complements modern interiors.

Comprehensive functionality: Available in all key configurations, including cylinder, bathroom, passage, and standard key systems.

A3 - Premium finishes: Optional PVD titanium coatings in various finishes for superior durability and a refined look.

Compatible with 'Less is More' and springless roses: Ideal for achieving a minimalist, elegant appearance while maintaining top-notch functionality.

The **DIN LOCK SERIES** is the ultimate solution for those who demand both performance and design excellence.

1

Stainless steel latch with anti-gap and anti-movement design.

Engineered to eliminate unsightly gaps and prevent unwanted door movement for a secure and polished finish. Made from high-grade stainless steel, ensuring long-lasting strength and resistance to wear and corrosion. Maintains a tight, precise fit between the door and frame, reducing noise and improving functionality. Designed for a clean and seamless look, complementing contemporary interiors. Smooth and consistent operation, perfect for residential and commercial applications.

2

Silent stainless steel latch with polymer technology.

Features advanced polymer components to ensure smooth and silent functionality, perfect for noise-sensitive environments. Combines durable stainless steel with technical polymer materials for enhanced wear resistance and longevity. Designed to deliver exceptional performance without compromising on aesthetics. The polymer components minimize friction, ensuring consistent and effortless operation over time. Ideal for residential, commercial, and hospitality applications, offering a premium, noise-free solution.

3

High-Tech polymer magnetic latch

Crafted entirely from high-tech polymer, delivering exceptional durability, lightweight performance, and corrosion resistance. Utilizes a powerful magnetic mechanism for smooth, noise-free door closure without the need for mechanical parts. A sleek design that complements contemporary interiors with clean, seamless functionality. Resistant to wear, ensuring reliable operation even in high-traffic environments. Lightweight and designed for effortless setup, making it ideal for a wide range of applications.

031

A

European cylinder function for DIN Lock

Designed to accommodate European profile cylinders, providing flexibility for a variety of locking solutions

B

WC function in DIN Lock

Fully compatible with all JNF WC indicator sets, ensuring seamless integration and a perfect fit. Features a snib mechanism for effortless locking and unlocking, providing a reliable solution for bathroom doors. Includes an external override function for added safety, allowing access in case of emergencies.

C

Passage type DIN Lock

Designed for doors that require passage functionality without locking, ideal for connecting spaces like hallways and living areas. Fully compatible with DIN lock cases for universal application and easy installation.

D

DIN lock with standard key function and 12 combinations

Designed for secure locking and unlocking using a traditional key, ideal for a variety of applications. Offers multiple keying options to enhance security and versatility for residential, commercial, or office spaces. Fully compatible with DIN lock cases, ensuring seamless integration and easy installation.

MAGNACORE

STRENGTH IN SILENCE, POWER IN PRECISION

Heavy-Duty grade 3 performance: Built for the toughest environments, ensuring reliability in high-traffic areas.

Centered magnetic latch: Provides precise alignment for smooth, effortless operation and enhanced durability.

Invisible screw design: A clean, seamless look for modern interiors and minimalist aesthetics.

Adjustable angle mechanism: Customizable angle to accommodate heavy handles, with fine-tuning via angle adjustments for optimal functionality.

Flexible key options: Available in normal key or bathroom versions for enhanced versatility.

Premium finishes: PVD titanium coating options offer a wide range of elegant and durable finishes to suit any design.

Discrete and powerful: Combines subtle design with uncompromising strength for a lock that performs without drawing attention.

The perfect choice for those seeking a sleek yet powerful magnetic locking solution that seamlessly integrates style and functionality.

MAGNALITE

STRENGTH IN SIMPLICITY, LIGHT IN DESIGN

036

FLAT LOCK SET

LOCK FOR RESIDENTIAL USE

The perfect fusion of the handle with the door. The cleanliness of the design frame combined with the low noise action brings out the FLAT lock.

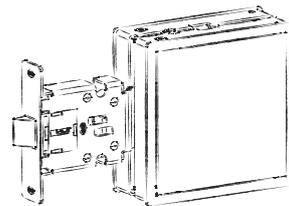

Lock with handle coplanar with the door. The handle is almost hidden, working by pressure, when activated, an element is projected that serves to pull the door.

The lock has a mechanism that allows the built-in shell system to maximum projection inwards.

The new JNF concealed lock is the perfect fit for your project. With a wide range of different materials and finishes, and the possibility of mixing both, you can create your own design. The attention to details became our focus.

The lock features a silent, smooth latch, enabling the recessed handle system to achieve maximum inward projection, enhancing ergonomics and user comfort.

Its advanced trifold latch design stands out as one of the best solutions for achieving low-effort, smooth door opening, providing a seamless and efficient user experience.

MAGSTRING LATCH

SIMPLE, SECURE, AND SLEEKLY CONCEALED

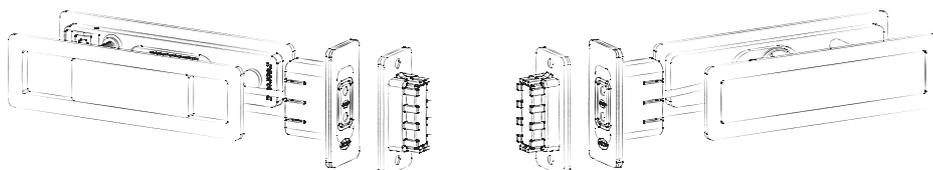

The MagString latch combines effortless operation with advanced design.

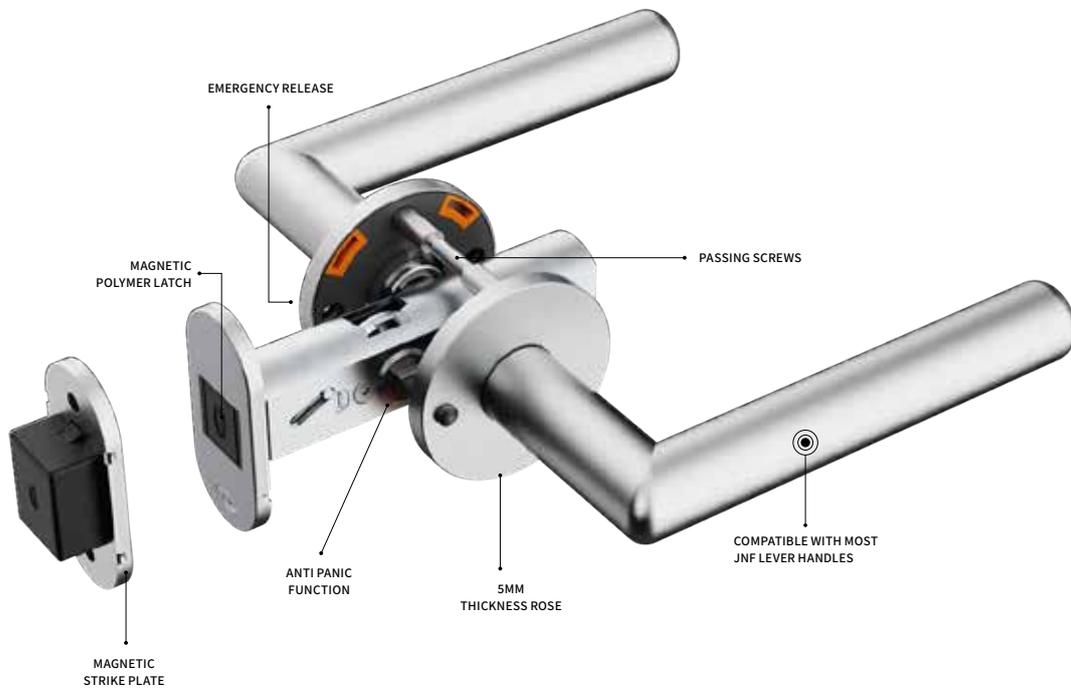

Featuring a magnetic mechanism operated by a durable rope, it ensures smooth and intuitive functionality while prioritizing safety with easy emergency access from the outside when needed.

Designed for flat and concealed applications,

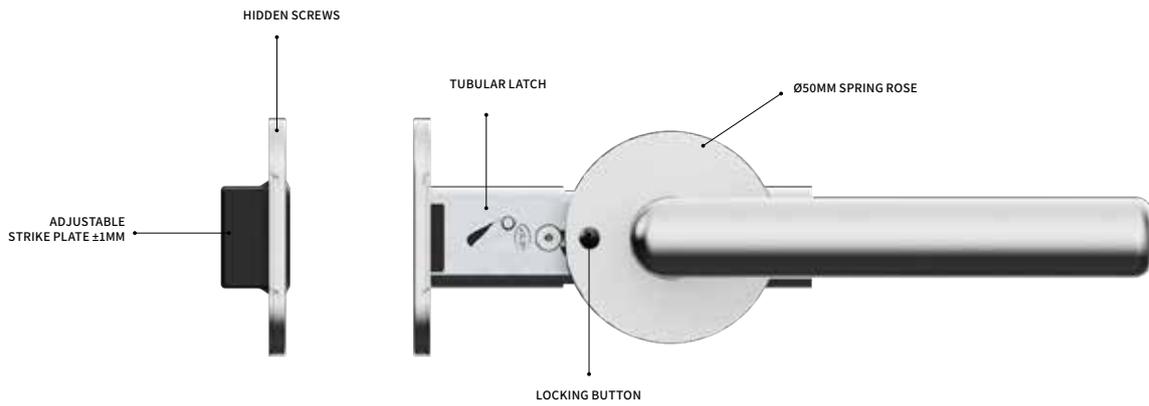

this latch seamlessly integrates into any environment, maintaining a clean, minimalistic look without compromising performance. Produced in stainless steel or premium PVD titanium finishes in various colors, it offers both versatility and style to match any design vision.

The perfect choice for those who value simplicity, security, and seamless aesthetics.

038

PULSELOCK

PRECISION SAFETY AT A TOUCH

Revolutionary anti-panic design: The locking mechanism is seamlessly integrated into the rose for ultimate simplicity. Lock securely with a press, and unlock instantly by pushing down the handle—providing intuitive, quick exit.

Magnetic latch made of polymer: Designed for silent and smooth operation, the high-performance polymer latch ensures a seamless user experience while reducing noise and wear.

Emergency access from outside: In critical situations, the lock can be easily unlocked using a simple tool, prioritizing safety without compromising the privacy.

Versatile compatibility: Perfectly designed to pair with most JNF lever handles, offering flexibility and style for a wide range of interior applications.

Elegant stainless steel plates: Front and strike plates crafted from stainless steel conceal screws for a modern, minimalist look. Optional PVD titanium finishes in various colors add durability and sophistication.

Unified, minimalist design: This system merges the lock, handle, and rose into a single, streamlined solution, delivering a clean, contemporary aesthetic.

NATUR LINEA

A TRIBUTE TO TIMELESS ELEGANCE

Drawing inspiration from the grandeur of Greek architecture and the opulence of the Corinthian style, this collection fuses classical beauty with modern functionality.

Rooted in the rich history of ancient Greece, where architectural elements spoke of refinement, power, and divine order, these lever handles embody the elegance of Corinthian columns—recognized for their intricate detailing and design.

These handles reflect the same sense of luxury and meticulous craftsmanship. Every curve, every contour, is thoughtfully designed to evoke the same sense of timeless beauty.

Their graceful forms, paired with fine detailing, effortlessly blend classical inspiration with contemporary appeal, making them ideal for both modern and traditional interiors.

052

LINEA COLORS

A SOPHISTICATED COLOR PALETTE

The **NATUR LINEA COLORS** collection is a stunning array of handles designed to blend form and function with a sophisticated color palette.

Each handle in this collection is thoughtfully crafted to add a distinctive aesthetic to any interior space.

Featuring a spectrum of refined hues, the collection includes: Bureal Blue, Mud Brown, Green Oxid, Aged Red, Black and White, ideal for adding a fresh and minimalistic touch to your interiors.

054

SIMPLE COLLECTION

BY LYDIA KÜMEL

The Simple Collection is a timeless tribute to functional design and European heritage, originally designed by Lydia Kümel in 1990's.

Drawing inspiration from the robust, ergonomic handles of Belgian train carriages, this collection merges industrial charm with modern elegance.

Resumed by JNF, the collection has been expanded to include versatile solutions tailored for furniture and bath collections.

Each handle embodies the meticulous craftsmanship and durability that defined the original design, now with several products and finishes.

DESIGN ROSE

DIAMETER 50MM, THICKNESS 5MM

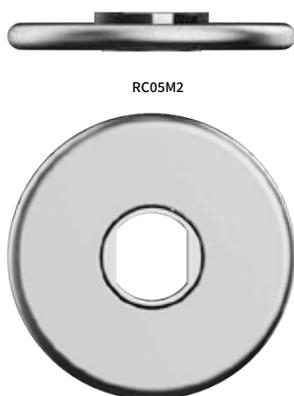

Fully compatible with all JNF handles, ensuring seamless integration and versatility. Designed to support even the heaviest lever handles, maintaining smooth and reliable operation. Tested to withstand 500,000 mechanical cycles, ensuring exceptional longevity. The rose can be fixed to the handle, creating a reinforced structure for enhanced durability and stability. Minimalist aesthetics with a 50mm diameter and 5mm thickness, offering a clean, modern look without compromising on functionality. Ideal for residential, commercial, and industrial applications where reliability and style are key.

Experience unmatched compatibility and performance with this round rose handle, designed to complement the full range of JNF handles.

COOL ROSE

REVOLUTIONARY DESIGN WITH PERFECT ROUND EDGE

Introducing the COOL ROSE, a groundbreaking concept in the ironmongery industry, featuring a solid cover with a perfectly rounded edge for a sleek and modern look.

Designed to seamlessly pair with all JNF handles, offering versatility and ease of integration. Built with a powerful spring mechanism to support even heavy handles, ensuring smooth operation and long-lasting performance. Tested to endure 500,000 mechanical cycles, guaranteeing reliability in high-traffic areas. The rose is securely fixed to the handle, creating a strong, unified structure for enhanced durability. A clean and sophisticated design with a perfectly rounded edge, redefining modern ironmongery aesthetics. Combines style and function with precise dimensions for a harmonious fit.

Step into the future of door hardware with COOL ROSE—where innovative design meets exceptional performance.

LOVEGROVE_xJNF

THREE UNIQUE COLLECTIONS

This partnership represents the fusion of two design powerhouses, combining JNF's engineering expertise with Lovegrove's radical aesthetic vision.

From initial sketches to the final product, each piece in this collection undergoes a rigorous development process. The LOVEGROVE_xJNF collection is deeply rooted in the principles of biomimicry.

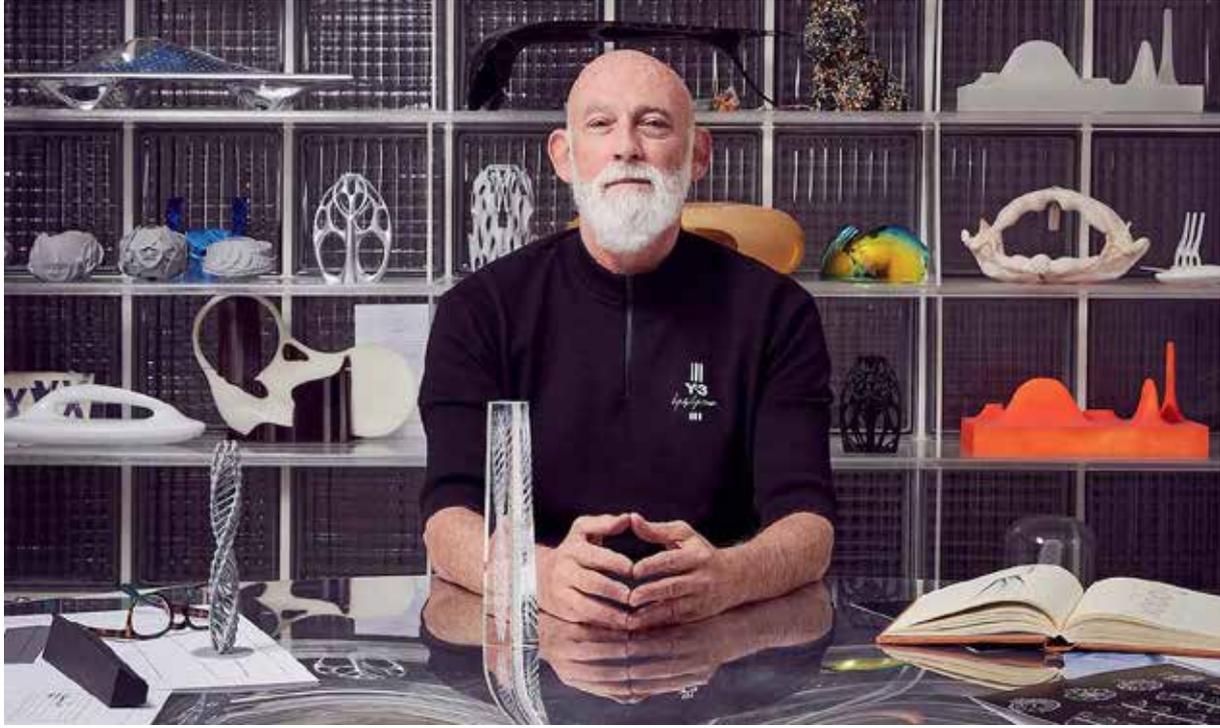

By mimicking nature's most efficient forms and systems, each design not only looks organic but functions in harmony with the environment. This approach allows us to create hardware that is not only aesthetically striking but also engineered for optimal performance.

The forms are born from an exploration of aerodynamics and organic growth, borrowing

shapes from fluid motion, cellular structures, and evolutionary processes. We embrace complexity not only for its aesthetic value but for its ergonomic functionality, ensuring that each piece feels intuitive in the hand, while its sculptural presence enhances any space.

This collection is a testament to the belief that modern design should do more than function—it should inspire. It challenges conventional hardware by fusing art and engineering, leaving behind purely utilitarian principles and entering the realm of crafted sophistication.

By incorporating advanced materials and 3D printing, the collection pushes the boundaries of what architectural hardware can be, combining precision with the beauty of natural flow.

072

BEHIND THE COLLECTION

ROSS LOVEGROVE

Born 1958, Ross Lovegrove graduated from Manchester Polytechnic with 1st Class BA Hons Industrial design in 1980 and took a Master of Design at the Royal College of Art, London in 1983. In the early 80's worked as a designer for Frog Design in West Germany on tech projects for companies like Sony and Apple; he later moved to Paris as a consultant to Knoll International, for which he created the highly successful Alessandri Office System.

Invited to join the Atelier de Nimes in 1984, alongside with Jean Nouvel and Phillippe Stark, he consulted amongst others: Cacharel, Louis Vuitton, Hermes and Dupont. Returning to

London in 1986 he has since worked on projects for Airbus Industries, Kartell, Ceccotti, Cappellini, Moroso, Luceplan, Driade, Peugeot, Apple, Issey Miyake, Vitra, Motorola, Biomega, LVMH, Narciso Rodriguez, Yamagiwa, Tag Heuer, Swarovski, Herman Miller, Artemide, Renault, Japan Airlines, Toyo Ito Architects, Kenzo, Valextra, GH Mumm, LG, FI, Samsung and KEF.

His work is held in permanent collections of various design museums around the world including the Museum of Modern Art in New York, the Design Museum in London, the Vitra Design Museum in Basel, the Die Neue Sammlung, in Munich and the Centre Pompidou, in Paris.

Ross Lovegrove approached this project with a visionary mindset, leveraging the transformative potential of 3D-printing technology, a production methodology which he pioneered over the last 20 years. Recognising the growing challenge of sameness in architectural hardware, Lovegrove sought to redefine the landscape of door handles and door accessories by exploring the limitless possibilities offered by advanced manufacturing processes.

This collaboration is set to push the boundaries of design and craftsmanship, delivering a collection that epitomises elegance, sophistication, and technological brilliance. This collection stands out as a perfect representation of our brand's commitment to innovation, sustainability, and contemporary design philosophies.

073

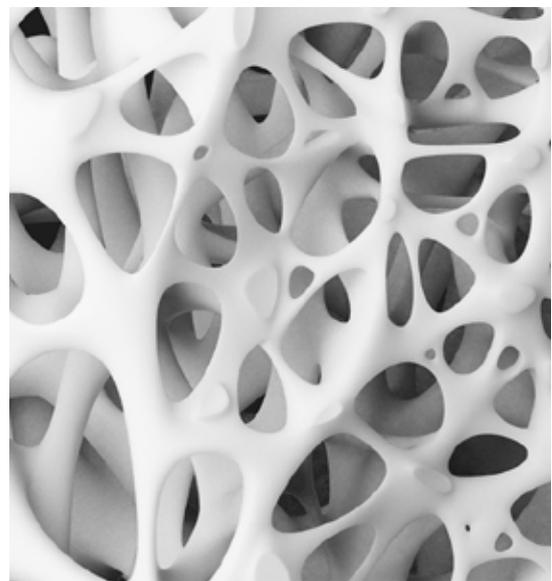

AEROFLOW COLLECTION

BY ROSS LOVEGROVE

ESSENTIAL

Inspired by the skeletal efficiency of avian evolution, this design seeks an extraordinary lightness. Drawing from the natural engineering of bird bone structures, it reinterprets minimal material use into a seamlessly 3D-printed metal form.

The result is a topology - optimised masterpiece - dematerialised yet structurally resilient. This design exemplifies the future of lightweight, high-performance architectural elements, merging cutting-edge technology with nature's most efficient designs.

“My objective with Aeroflow was to create a truly minimalist structure unlike anything in the industry.”

Inspired by bird skeletons and the natural forces of intelligent material reduction, it stands as the antithesis of solid mass. This design embraces negative space, dematerialization, and the interplay of light and shadow on organic metal structures. It embodies the forefront of my work as a designer, aligning closely with my core philosophy. Each piece in the Aeroflow Collection possesses its own distinctiveness, transforming the daily act of opening a door or drawer into a harmonious experience, seamlessly integrating into your personal culture.”

ARCHITECTURAL COLLECTION

BY ROSS LOVEGROVE

TIMELESS

This design captures the intricate possibilities of additive manufacturing, weaving them into a refined architectural language. It offers a unique tactile experience, distinct from any other door handle, while maintaining a disciplined aesthetic that appeals to both large and small architectural projects.

078

The handle embodies an elegant fusion of cultural depth and material precision, making it a timeless addition to spaces where long-term significance and thoughtful design are paramount.

“Architectural celebrates the beauty born from organized structural complexity. It pushes production boundaries, achieving a four dimensional impact that defies conventional processes, making it truly contemporary.”

Inspired by a desire to liberate the solid and infuse it with a sense of structural lightness, Architectural finds beauty in repetition. This collection merges industrial complexity with selective material integrity, creating designs that are both visually striking and physically tactile.

CORAL SYNTH COLLECTION

BY ROSS LOVEGROVE

ORGANIC

Inspired by the organic elegance of coral growth, this handle exudes a luxurious presence grounded in nature's beauty. The design's luxurious essence, derived from the Latin word *Luxus* (meaning blossoming), evokes the feeling of something growing naturally from the door.

Its form is generous to the touch and reflects light like a finely crafted jewel. This piece complements the emerging trend of refined craftsmanship in high-end spaces, where beauty and functionality meet in perfect harmony.

“The CoralSynth Collection transforms hardware into jewelry, elevating it from pure functionality into the realm of Object Art.”

These tactile, generous forms bring a new level of attention to detail, interacting harmoniously with the materials around them and enhancing the value of one's home. Inspired by coral growth, each piece is voluminous and reflective, capturing light in a way that radiates natural beauty. Designed to lift the spirit of the user from consumer to collector, Coral Synth invites you to own and appreciate beauty in every corner and dimension of your space.

HYDRAULIC PIVOTS

FROM 10KG UP TO 500KG

The CAM SYSTEM combined with hydraulics allows the closing control of large swing doors, while opening them with little effort. The doors can be single or double action, with minimum thickness 35mm.

The system is hidden inside the door, with only a small base on the floor, with bidirectional regulation and a rotation point on the roof or upper frame of the door with built-in bearing.

The closing control is carried out by two valves that can precisely adjust the initial and final closing speed, the final speed

being especially important when the door has a lock installed.

In order to cover doors with weights from 10 to 500kg, lengths up to 3000mm and height up to 8000mm the system has force adjustment, which can be done with the door already installed.

One of the characteristics of this system is that the rotation point of the door can be from 50mm to the center of the door, with the installation being made from the top of the door, which allows the doors to go up to the ceiling.

HYDRAULIC PIVOT

The CAM SYSTEM combined with hydraulics allows the closing control of large swing doors, while opening them with little effort. The doors can be single or double action, with minimum thickness 50mm.

The system is hidden inside the door, with only a small base on the floor, with bidirectional regulation and a rotation point on the roof or upper frame of the door with built-in bearing. The closing control is carried out by one valve. In order to cover doors with weights from 40 to 200kg, lengths up to 3000mm.

One of the characteristics of this system is that the rotation point of the door can be from 40mm to the center of the door, with the installation being made from the top of the door, which allows the doors to go up to the ceiling.

HEAVY DUTY FREE PIVOTS

HIGH-PERFORMANCE PIVOT DOOR SYSTEM

Designed to deliver maximum efficiency, the pivot door system combines high load capacity with exceptional performance. Its advanced engineering ensures smooth and seamless opening and closing, providing a refined and quiet user experience.

With precise adjustment features, it allows for fine-tuning during installation to ensure perfect alignment and highly accurate results. Ideal for projects demanding quality, durability, and sophisticated aesthetics.

IN.05.500

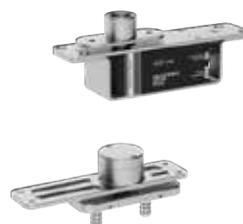

Heavy duty free pivot for timber or metallic doors up to 500kg. Possible to adjust in 3 axes even with door already installed. This model is concealed on the floor. All the adjustment mechanisms are located on the floor.

IN.05.501

Heavy duty free pivot for timber or metallic doors up to 500kg. Designed to be installed without opening hole on the floor. Just with two screws we can guarantee 500kg door. The upper mechanism provides simple installation and adjustment.

093

HYDRAULIC PATCH FITTINGS

FOR GLASS DOORS

This versatile series of hydraulic pivots for glass doors is designed to adapt to almost any installation scenario. The innovative cam system, combined with hydraulic technology and robust springs, ensures effortless door opening while delivering precise and controlled closing, even in outdoor applications.

Crafted with stainless steel covers and available in premium PVD titanium finishes, these pivots seamlessly complement any type of decor, offering both durability and style for modern architectural designs.

- .TP Mirror Polished Titanium
- .MB Mirror Black
- .MG Mirror Gold
- .MCO Mirror Copper
- .MCH Mirror Chocolate
- .MCP Mirror Champagne

097

STANDARD FINISH SATIN OR BRUSHED .S

This one is our standard finish available in all our hardware. The surface is polished with special brush material to achieve a discrete matte finish with a brushed effect. It's a very discrete finish that gives our fittings a faint reflect about the surrounding colors.

MECHANICAL FINISHES INDUSTRIAL .RAW

This finish is achieved at the final phase of the polishing process. The parts are submitted to an abrasion treatment. The end result is absolutely dull pieces with a very nice texture to be touched. Visually, the pieces have a grey concrete like color, giving the pieces an industrial look, like if they were tools. All our products are available with this finish, however there is a limit on the maximum length of 600mm.

MECHANICAL FINISHES PURE GRAIN .PR

This finish is achieved in the final phase of the polishing process. The product has a very smooth matte grain texture effect, developing the shape of the design with discrete shadows.

MECHANICAL FINISHES MIRROR POLISHED TITANIUM .TP

As the name already suggests, the surface is so shining that can reflect the surrounding as one mirror. This finish is achieved with a very careful process and the result is very bright pieces with a lot of light.

SPECIAL FINISH PVD TITANIUM COATED .TB / .TG / .TCO / .TCH / .TCP / .TGM

This is one exceptional high quality finish made exclusively by physical technology. Several metallic colors can be achieved with high resistance to abrasion and corrosion. This non pollution technology is widely used in the watchmaking industry. Some colors performed at JNF: Natural Titanium, Gold, Bronze, Copper, Champagne, Deep Black, Gun Metal, Dark Chocolate.

SPECIAL FINISH PVD TITANIUM AGED .TCB / .TAG / .TAC / .TAB

A very matte and textured finish is achieved with this process. Our range of colors such as Aged Gold, Coal Black, Aged Copper and Aged Bronze can provide an antique touch to the decoration.

SPECIAL FINISH PVD TITANIUM GRAIN .GB/.GG/.GCO/.GCH/.GCP/.GGM

It is a smooth matte titanium finish with a grain texture and very discrete shadows in metallic colors such as Gold, Champagne, Black, Gun Metal, Copper and Chocolate.
